About Principal engineer from FinTech company

Work **Principal Engineer** - Forge Global   Sep 2019 -Feb 2023

* Launched multiple mission-critical apps, including AML (anti money laundering) / KYC regulatory compliance tools.
* Helped to improve the development infrastructure and optimize the CI/CD pipelines.
* Led and mentored the engineering teams on software development best practices, such as domain-driven design and performance optimizations.

Lead Software Engineer - True Link Financial   May 2018 -Jun 2019

* Built and shipped the True Link STABLE VISA cards infrastructure using Ruby on Rails and React. STABLE is the first and largest national ABLE Act program.
* Provided technical leadership and hands on implementation role as the engineering lead for the Trust investment management team.
* Created and drove best practices across the engineering team. Mentored developers by providing guidance on architecture and design of features.

Senior Software Engineer - Points   Jul 2015 -Feb 2017

* Worked as a senior software engineer responsible for refactoring and architecting the legacy Rails app.
* Created the fully auditable accounting system using the Event Sourcing pattern, and implemented the pricing algorithm to maximize revenue and conversions.
* Mentored four junior developers.

Founding Engineer - Hired   Sep 2012 -Dec 2014

As the 1st employee engineer of the Hottest Startup of 2013 (according to Forbes), worked with a team of 8 full-stack engineers, implementing the founders' vision of creating a marketplace for talents, using Ruby on Rails and Angular.js on Heroku.

Software Engineer - Outright   Jan 2011 -Aug 2012

Worked as a Ruby on Rails developer in the team responsible for integrating and securing its payment processing system, using Ruby on Rails HTML5/CSS3, and jQuery Framework.

Education **N/A Deep Learning Workshop** at Stanford University Jan 2016

Bachelor of Arts (BA) Philosophy at St Johns College Jan 2006

🔧 Ruby (advanced), JavaScript (advanced), Python (advanced), React (advanced), Redis (advanced), Software Architecture (advanced), GraphQL (advanced), PostgreSQL (advanced)

🌐 Open to remote work. Willing to Relocate to: San Francisco Bay Area, New York City, Anywhere in the US

💼 Authorized to work in the US

About *What are you looking for in your next role?*

I'm especially interested in companies that are embracing cutting-edge technologies and promoting innovation. Industries that are at the intersection of technology and creativity—like NFTs, blockchain, or fintech—particularly excite me, as I see the massive potential for unique user experiences and groundbreaking projects. Working with teams that are collaborative, forward-thinking, and value open communication is also crucial to me.

Describe a project that you worked on that you are proud of

Anna Borja
Senior Software Engineer @ Netflix
Anna worked with Peter on the same team

It was such a joy and privilege to work with Peter! Not only is he an intelligent and highly skilled and experienced engineer, but he's also so gracious and caring towards his coworkers. Peter has a way of brightening any room or meeting with his kindness and positive attitude.

I worked with Peter on an intense, month-long crunch to onboard a huge client for our company, and Peter's work ethic and excellent engineering sensibilities made him someone I was extremely glad to have on the team. In short, I'm sad to no longer be working with Peter, and I hope our career paths cross again someday!It was such a joy and privilege to work with Peter! Not only is he an intelligent

Isaac Lee
Software Engineer @ Meta
Isaac reported directly to Peter

I had the absolute honor of working with Peter at True Link, and I can say with certainty I have never worked with a Lead Software Engineer that had even half of the communication skills or technical understanding as Peter. He managed/worked with me on several key projects at True Link, including setting up an API that was a key feature in bringing onboard our largest customer. Throughout the process his insight into setting up servers and setting challenging but achievable goals was crucial in making sure that the features we built were well written, properly tested, and still delivered on time.

It's a damn shame I'm no longer working with him but I would love to work with him again.

Matthew Gould
Founder & CEO @ Unstoppable Domains

Peter is an amazing developer able to build large complex systems that scale. I saw first hand how he helped to grow Hired's engineering team from 2 to 20 all while maintaining break neck growth rates in product usage. Any founding team would be lucky to have him.

Company preferences
Ok with any company size.
